PTS33: EVAP System Diagnosis

- This new one night class will focus on the latest developments in EVAP systems and help in the diagnosis of the codes they set.
- The procedures are based on field tested techniques using tools that are readily available.
- This approach gives you **more than just book specifications**, (which are frequently wrong) but real numbers **based on actual on the car diagnosis**.

Here's what's included:

- Complete Evaporative System diagnosis, including sensor and code testing
- EVAP leak testing strategies
- Testing with common tools such as a DVOM and a vacuum pump
- Correct use of smoke type leak testers
- Common failures, tips, and bulletins
- Case studies to demonstrate diagnosis
- A workbook containing the test techniques

These Tech Line questions will be answered:

- This car has a small leak DTC. I cleared the code and it didn't come back. What should I do now?
- The tank is hard to fill on this truck. What is wrong?
- What do these vapor valves do on this Honda system? How do I test them?
- How do I verify the repair? I drove the car for 30 minutes but the EVAP monitor still didn't run.

Sponsor: Fairfax Auto Parts

Seminar Location: Lake Ridge AutoCare at 12234 Touchstone Circle in Woodbridge

Date: **November 6, 2006** (Monday)

Dinner Time: 6:00 PM

Class Time: 6:30 PM
