

ENGINE MANAGEMENT TECHNOLOGY™

Professional Technician's Seminar Series

PTS74: PCM Reprogramming with 2534

- This new seminar is designed to inform the shop owner and driveability technician that must reprogram Powertrain Control Modules as a service or after replacement.
- This course uses field developed techniques designed to make this service profitable for your shop.

Here's what's included:

Do I really need it? How much equipment will I need? What about all the negative comments I have heard? How do I deal with anti-theft?

This one night class will answer these questions and more. This class will focus on ways to make vehicle computer reprogramming a profit center in your shop. J2534 is a reprogramming method that is being adopted by most vehicle manufacturers. Using this method, one universal tool can be connected to the vehicle computer and the OE web site or CD in order to perform reprogramming on an existing computer or to prepare a new one for installation.

Information will be presented on:

- When to perform a flash
- Selling the service
- Equipment requirements
- Using the OE web sites
- Precautions and techniques for successful flashing
- How to perform the relearn on engine systems
- How to reset anti-theft
